Austin, TX, USA

## SUMMARY

Computer architecture researcher focused on **systems for machine learning** and **in-memory computing**, with a PhD (UCI, 06/2025). I bring hands-on experience modeling and scaling **multi-chiplet heterogeneous systems** in **gem5**, conducting workload-driven **performance calibration** and **kernel-level analysis** (C/C++/Python), and leading **software-hardware co-design** efforts that resulted in two patent filings and first-author publications (e.g., TPAMI, JETC, TETC, DATE). I aim to advance **high-performance, energy-efficient ML acceleration** on server-class architectures through architecture research, workload characterization, and cross-functional collaboration.

## INDUSTRY EXPERIENCE

### • Arm, Inc.

06/2025 – Present

Austin, Texas

*Senior Research Engineer*

- Modeling **multi-chiplet heterogeneous systems** in **gem5** to evaluate scalability and performance across diverse workloads, including machine learning kernels
- Designing and executing **performance calibration** studies; collecting memory bandwidth, cache hit rates, and latency distributions to diagnose bottlenecks and inform system-level tradeoffs
- Performing **kernel-level analysis** (C/C++/Python) of instruction mix, vectorization, memory access locality, and synchronization patterns, and proposing software–hardware optimizations aligned with internal roadmaps
- Building automated **build/run/post-processing pipelines** (Python/Bash) to ensure reproducibility and scale, and collaborating via Git
- Authoring internal reports and presenting findings to architecture/research teams to drive design decisions

### • Arm, Inc.

06/2024 – 09/2024

Austin, Texas

*Computer Architecture Research Intern*

- Characterized a diverse set of **machine learning workloads**, using **perf** and **gem5** to profile instruction mixes, memory access patterns, and microarchitectural bottlenecks on Arm-based CPU systems
- Identified key performance bottlenecks (e.g., vectorization inefficiencies, memory bandwidth limitations) and **conceptualized a specialized SIMD-capable hardware accelerator** to target these critical computational kernels
- Estimated **hardware resource requirements**, including area, cache utilization, and memory bandwidth using internal modeling tools, and explored the integration of the accelerator into the Arm pipeline
- Co-designed **software-hardware interfaces and execution flows** to maximize offloading efficiency and ensure compatibility with existing Arm toolchains, demonstrating significant performance improvements over baseline
- *Contributed to two patent filings based on the developed architectural techniques (already filed, not public yet)*

### • Arm, Inc.

06/2023 – 09/2023

Austin, Texas

*Computer Architecture Research Intern*

- Investigated a **tightly coupled CPU architecture extension** aimed at accelerating data analytics workloads on Arm-based systems and contributed to early-stage architectural evaluation and design discussions
- Deployed and characterized **Apache Hadoop** and **Spark** benchmark suites on a multi-node cluster to exercise diverse data processing kernels representative of real-world analytics pipelines
- Performed detailed **bottleneck analysis** using **perf** and **Java Flight Recorder**, identifying instruction-level and memory access inefficiencies and outlining optimization opportunities enabled by the proposed extension

### • Arm, Inc.

06/2022 – 09/2022

Austin, Texas

*Machine Learning Research Intern*

- Designed and developed a **machine learning-based automated design space exploration framework** to efficiently identify high-performance, low-cost configurations of Arm processor designs, targeting complex trade-offs
- Implemented and integrated **reinforcement learning**, **deep neural networks**, and **active learning** pipelines in Python for iterative exploration and developed robust data preprocessing, feature engineering, and postprocessing modules to enable scalable, statistically sound evaluations
- Interfaced the ML framework with an **Arm hardware simulator** through automated Bash workflows, enabling end-to-end generation, simulation, and analysis of thousands of design points without manual intervention

## ACADEMIC EXPERIENCE

---

### • University of California, Irvine

*Graduate Student Researcher*

10/2020 – 05/2025

Irvine, CA

- Led the effort to propose a reconfigurable in-memory accelerator for Large Language Model inference in collaboration with KAUST
- Surveyed mixed-precision neural networks, which resulted in a first-author publication in TPAMI
- Proposed an analytical simulator for an in-memory Hyperdimensional Reinforcement Learning accelerator, resulting in a first-author journal publication in JETC
- Implemented an accurate functional simulator for faster Decision Tree inference using Python and MATLAB, resulting in a first-author journal publication in TETC

### • King Abdullah University of Science and Technology

*Visiting Student Researcher*

04/2024 – 05/2024

Thuwal, Saudi Arabia

- Developed a novel analytical simulator for a reconfigurable in-memory Convolutional Neural Network inference accelerator, resulting in a first-author paper under review
- Conducted a software-hardware co-design for a proposed in-memory inference accelerator for modules in Large Language Models using Python, resulting in a first-author paper published in DATE
- Met and discussed new potential machine learning acceleration projects with collaborators at KAUST

### • University of California, Irvine

09/2021 – 03/2022, 01/2025 – 03/2025

Irvine, CA

*Teaching Assistant (Introduction to Python Programming/Advanced C Programming/Intro to Digital Systems)*

- Taught students how to solve mathematical formulations, process images using data structures in Python/C, and digital design principles
- Prepared assignments and exams and delivered weekly online and in-person discussion sessions and labs.
- Met regularly with the course Professors to present progress and developed Bash scripts for grading

### • University of California, Irvine

07/2019 – 09/2019

Irvine, CA

*Hardware Engineering Intern*

- Implemented a hardware-based real-time temperature tracking solution on the Nexys Video FPGA
- Utilized the DRP interface of the XADC soft core to tap into registers where temperature data is stored and customized a FIFO core to store different instances of temperature data
- Designed a DAC module and displayed the analog temperature value on the OLED of the FPGA
- Acquired knowledge about the RISC-V processor, the Information Processing Factory Project, Vivado tools, and different FPGA boards
- Extended the internship as a senior-year project collaboration between UCI and AUB and developed dedicated hardware modules for the Trace Abstraction Layer of the Information Processing Factory to enable real-time non-intrusive on-chip FPGA system verification using VHDL and C, which resulted in a second-author publication in VLSI-SoC and another publication in DATE

### • American University of Beirut

01/2018 – 06/2020

Beirut, Lebanon

*Undergraduate Student Researcher*

- Explored the energy, latency, and quality of various state-of-the-art Resistive RAM-based Ternary CAM implementations, which resulted in a first-author publication in TCAS-II
- Improved the efficiency of rare-fail event estimation statistical methodologies by proposing novel hybrid algorithm designs and testing them
- Implemented the proposed algorithms in MATLAB/PERL/HSPICE and evaluated them on 16nm SRAM designs, resulting in two publications in ISCAS

## EDUCATION

---

### • University of California, Irvine

09/2020 – 06/2025

Irvine, CA

*MS/PhD in Electrical and Computer Engineering*

- PhD in Electrical and Computer Engineering **conferred 06/2025**; Dissertation: *In-Memory Computing to Accelerate Machine Learning*
- MS in Electrical and Computer Engineering **conferred 06/2022**; Thesis: *Resistive Content Addressable Memory Design for Decision Tree Acceleration*
- GPA: 4.00 / 4.00

### • American University of Beirut

08/2016 – 05/2020

Beirut, Lebanon

*Bachelor of Computer and Communications Engineering*

- Graduated with high distinction
- Minored in Mathematics and Business Administration
- Cumulative GPA: 88.67 / 100

## PROJECTS

- **Canny Edge Decoder** 01/2021 – 04/2021  
*Tools/Platforms: C, SpecC, RISC-V*  
◦ Designed a multi-threaded version of the Canny Edge Decoder  
◦ Migrated the sequential C code to a RISC-V Virtual Platform with LCD and Camera device drivers' support  
◦ Completed a parallel, pipelined system-level design of the Canny Edge Decoder, and received an A for the projects as part of EECS222: Embedded System Modeling and EECS226: Embedded System Software
- **Novel 4-Bit ALU** 01/2019 – 05/2019  
*Tools: Cadence*  
◦ Proposed a novel efficient 4-Bit ALU design using modified Shannon theorem  
◦ Reviewed related works in literature  
◦ Designed the adder using 90nm technology, and performed schematic-level simulations  
◦ Demonstrated that the ALU is more compact, faster, and more power efficient when compared to the CMOS-based design, and received an A for the project as part of EECS412L: VLI Computer Aided Design Lab
- **Quantum Cellular Automata Literature Review** 01/2019 – 05/2019  
*Tools: Research*  
◦ Conducted an in-depth literature review on **Quantum Cellular Automata (QCA)** as a nanotechnology computing paradigm, focusing on fundamental device principles, layout structures, and clocking mechanisms.  
◦ Analyzed and compared multiple **QCA logic gate implementations** (e.g., majority gates, inverters, XOR structures), highlighting trade-offs in area efficiency, signal propagation, and fabrication feasibility.  
◦ Delivered a well-structured written report and presentation as part of a VLSI course, **earning a full grade** for technical depth, clarity, and critical analysis.

## SKILLS

---

- **Programming Languages:** C, C++, Python, MATLAB, SpecC, HDL (Verilog/VHDL), Gem5, OrCAD PSpice, HSPICE, Perl, Shell Scripting, LaTeX
- **Machine Learning Models:** Large Language Models, Convolutional Neural Networks, Decision Trees, Reinforcement Learning
- **Other Tools:** Perf, Java Flight Recorder, Flame Graphs, Visual Studio Code, Cadence, Github, Overleaf, Microsoft Office programs
- **Specialized Area:** In-memory computing, Hardware acceleration, Statistical analysis methodologies
- **Soft Skills:** Research, Teambuilding, Leadership, Written and verbal communication, Time management

## CERTIFICATIONS AND AWARDS

---

- **iREDEFINE Fellow** 03/2025  
*National Science Foundation*
- **10-week Hardware Design Program** 05/2023  
*VLSI System Design*
- **High Level Synthesis Tutorial – DAC 2021** 01/2022  
*Cadence Design Systems*
- **DAC'21 Young Fellow** 12/2021  
*Design Automation Conference*
- **Best Computer Hardware System Project** 05/2020  
*Maroun Semaan Faculty of Engineering and Architecture*
- **Dean's Honor List** 09/2016 – 06/2020  
*Maroun Semaan Faculty of Engineering and Architecture*
- **One-year PhD Fellowship (Merit-Based)** 09/2020 – 09/2021  
*University of California, Irvine*

## PROFESSIONAL SERVICE & MENTORING

---

- **Peer Reviewer** 2020 – 2025  
*Journals & Conferences*
  - 2026 Design Automation Conference (The Chips to Systems Conference)
  - IEEE Transactions on Circuits and Systems for Artificial Intelligence
  - 2026 Design, Automation and Test in Europe Conference
  - IEEE Circuits and Systems Magazine
  - 22nd International Conference on Hardware/Software Codesign and System Synthesis
  - IEEE 66th International Midwest Symposium on Circuits and Systems
  - IEEE Transactions on Circuits and Systems I: Regular Papers
  - ACM Transactions on Architecture and Code Optimization
  - IEEE Transactions on Computers
- **Mentor, Techotolia Robotics (Team #7748)** 07/2025 – Present  
*FIRST Robotics Competition*
  - Mentoring a **high-school** FRC team via regular Zoom meetings
  - Providing technical guidance, planning, and materials preparation to support competition readiness
  - Applying for funding on behalf of the team to help them cover registration costs and material costs
- **Mentor** 08/2018  
*All Girls Code*
  - Mentored a hackathon where girls developed apps and made websites tackling tech and health
  - Participated in organizing the hackathon and answering questions, and connected with other mentors

## VOLUNTEERING EXPERIENCE

---

- **Youth Member** 10/2018 – 05/2019  
*Lebanese Red Cross*
  - Underwent training courses such as prevention from sexually transmitted diseases and disaster and preparedness
  - Engaged in activities and helped in organizing some that are targeted toward the elderly segment in Lebanon
- **Tutor** 07/2018 – 08/2018  
*BASSMA*
  - Helped children as a part of the Night School Program sponsored by Touch Lebanon
  - Supported public school students in the 7th, 8th, and 9th grades, who are drawn from underprivileged families
- **Writer** 10/2018 – 06/2020  
*AUB Outlook*
  - Published Arabic articles about different social issues
  - Met with the team of writers and editors on weekly basis

## **ADDITIONAL INFORMATION**

---

**Languages:** English (Fluent), Arabic (Fluent), French (Elementary Proficiency)

**Interests:** Writing articles, Reading novels, Watching crime docu-series, Hiking, Chasing sunsets, Weightlifting

*Additional references are available upon request*
